

INTRODUCTION

This product adopts piezoelectric effect of artificial polarized ceramic for design. it is suitable for monitoring of all kinds of vibrating mechanical facility, specially the vibration measurement of rotating and reciprocating machinery. The unit can measure acceleration, velocity and displacement. It also measures temperature of the object under test.

APPLICATION

It is widely used in mechanical equipment manufacturing, motor installation and testing, electric power, metallurgy and general aviation field. Since this instrument can measure temperature up to 80° C, it becomes an ideal tool for mechanical engineers working on motor, generator or any fixed mounted rotating devise.

FEATURES

- LCD displays measurement result and conditions directly
- Measures acceleration (m/s² peak), velocity (mm/s RMS) and displacement (mm p-p)
- Selective vibration characteristic
- Uses hi- sensitive vibration sensor for accurate measurements
- Magnetic probe is provided, to be used for holding the sensor in un-easy conditions
- Equipped with two probes (SHORT and LONG) to adapt to the different measurement requirements
- Low battery Indication
- Auto Power Off
- Backlit LCD Display
- Maximum value Hold function
- Measures Temperature in °C /°F
